

AASHTOWare Project SYNC Service™

What is it?

The AASHTOWare Project SYNC Service™ is the vehicle in which data is securely stored and passed between agency computers and mobile devices. To use the service, agencies must be in production with the AASHTOWare Project SiteManager™ or AASHTOWare Project FieldManager™ software and its users of mobile devices must download Info Tech's Mobile Inspector application (available at no cost in the Apple and Google Play stores). The Mobile Inspector™ application provides inspectors with the ability to collect the data required for a daily report in the field, including item progress, contractor work force, photos* and site conditions. This application can be used on tablets or smartphones, can be used on-line or off-line, and can accommodate any size contract.

Mobile Inspector application in use with the AASHTOWare Project FieldManager software.

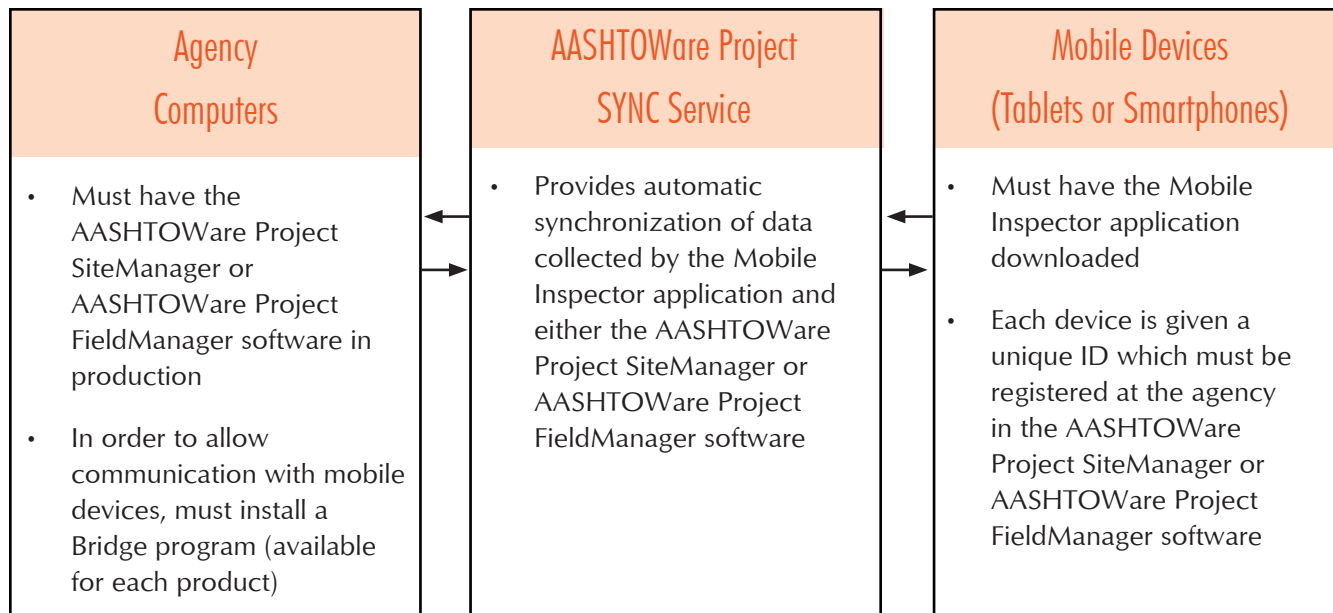

How does it work?

A Bridge program is available for download, which is a plug-in to either the AASHTOWare Project SiteManager or AASHTOWare Project FieldManager software and allows for communication with the AASHTOWare Project SYNC Service. When the Mobile Inspector application is downloaded onto a mobile device, that device is given a unique ID. The ID is then provided to an Agency Administrator who assigns the device ID to a user in either the AASHTOWare Project SiteManager or the AASHTOWare Project FieldManager software. The AASHTOWare Project SYNC Service communicates between the Mobile Inspector application on registered mobile devices and the Bridge plug-in program. The

**photo function available in the AASHTOWare Project FieldManager software only.*

service pushes new contracts into the Mobile Inspector application and relays contract data back to the AASHTOWare Project SiteManager or AASHTOWare Project FieldManager software. Devices can go completely offline while data is being entered and the data will be sent/received once connectivity has been restored.
