Name of Product/Version

The AASHTOWare Project Asset Tracker™ Software as a Service (SaaS) product / July 1, 2025

Report Date

7/1/2025

Product Description

The AASHTOWare Project Asset Tracker™ Software as a Service (SaaS) product is a tool designed to connect web-based AASHTOWare Project™ data at any phase—from design to completed project—to an asset ID. The AASHTOWare Project Asset Tracker SaaS product maintains pay item data at the asset level, which the system rolls up to the total quantity items used by web-based AASHTOWare Project. Items in the AASHTOWare Project Asset Tracker SaaS product are connected to web-based AASHTOWare Project cost estimate items, project items, or contract project items, depending on the stage of the project. Connecting pay items to an asset ID enables agencies to connect their AASHTOWare Project data to their asset inventory and geospatial database to ensure accurate data in an efficient manner.

Voluntary Product Accessibility Template (VPAT) Version 1.3

Last Updated: 5/8/2018

Supporting Features (second column on VPAT™)	
Supports	It has been determined that the product fully meets the letter and intent of the criteria.
Supports with Exceptions	It has been determined that the product does not fully meet the letter and intent of the criteria, but provides some level of access relative to the criteria.
Supports Through Equivalent Facilitation	An alternate way to meet the intent of the criteria has been identified, or the product does not fully meet the intent of the criteria.
Supports When Combined with Compatible AT	It has been determined that the product fully meets the letter and intent of the criteria when used in combination with compatible Assistive Technology (AT). For example, many software programs can provide speech output when combined with a compatible screen reader (commonly used AT for people who are blind).
Does Not Support	It has been determined that the product does not meet the letter or intent of the criteria.
Not Applicable	It has been determined that the criteria do not apply to the specific product.
Not Applicable - Fundamental Alteration Exception Applies	It has been determined that a fundamental alteration of the product would be required to meet the criteria (see the access board standards for the definition of "fundamental alteration").

Voluntary Product Accessibility Template®

Trns•port FieldNet 3.2a

Criteria	Supporting Features	Remarks and explanations
(a) A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).	Supports	There are few non-text elements that are content related on the FieldNet Web page. The few logos and banners that appear do use the ALT attribute of the IMG tag.
(b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.	Not Applicable	FieldNet does not present multimedia content.
(c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.	Supports	Color is irrelevant to critical functionality.
(d) Documents shall be organized so they are readable without requiring an associated style sheet.	Supports with Exceptions	FieldNet uses external style sheets. There can be some display problems viewing the pages without these style sheets. However, users can easily load a custom .css file in their browser, which will allow them to select the attributes that need to be changed.
(e) Redundant text links shall be provided for each active region of a server-side image map.	Not applicable	FieldNet does not use image maps.
(f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.	Not applicable	There are no image maps.

Trns•port FieldNet 3.2a

Criteria	Supporting Features	Remarks and explanations
(g) Row and column headers shall be identified for data tables.	Does Not Support	Table headers use the <td> (data cell) tag, not the <th> (table header) tag. Rows use the id attribute of the <tr> class but are likely of limited use from an accessibility standpoint. Ex. <tr id='Row_0_1' ... >
(h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.	Does Not Support	The tables do not associate column or row headers with data cells. The easiest method to satisfy this requirement is with the scope attribute. The other option is using the <th> tag in conjunction with the id attribute. Tables currently use the id attribute for the <tr> tag.
(i) Frames shall be titled with text that facilitates frame identification and navigation	Not Applicable	Technically, frames are not used in FieldNet. <Div> sections segment areas of the screen that are similar to frames. Tables are used within these <Div> sections. At any rate, these elements are not titled either by text in the body or by attributes.
(j) Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.	Supports	The application appears to be compliant.
(k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.	Not Applicable	There is no text-only page to force compliance. With the exception of tables, FieldNet is text-only.

Trns•port FieldNet 3.2a

Criteria	Supporting Features	Remarks and explanations
(l) When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.	Supports	Most script calls in FieldNet are made with the onclick event from buttons. They are not identified with functional text, but the name of the button explains the functionality invoked by the routine. According to access-board.gov, this works well with screen readers.
(m) When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).	Not Applicable	FieldNet requires a Web browser on the client side only.
(n) When electronic forms are designed to be completed on-line, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Supports with Exceptions	FieldNet does not use form tags, but there are form like tables present. Input fields are not identified as access-board.gov suggests. Most fields are read as "Editable Text" with narrator or "Edit" by JAWS. When descriptions are close to the fields though, JAWS reads the description followed by "Edit" in most situations.
(o) A method shall be provided that permits users to skip repetitive navigation links.	Not Applicable	FieldNet has a similar set of buttons at the top of most pages, but they are not really navigational links. With the exception of a link to the main menu these buttons pertain to the page being viewed. For example, the Save button saves changes made to that page.
(p) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.	Not Applicable	Timed responses are not present in FieldNet.

Trns•port FieldNet 3.2a

Criteria	Supporting Features	Remarks and explanations
Comments (Usability Issues, Other Concerns)		<p>FieldNet can be accessed by keyboard only. JAWS interferes with that ability when the default 'JAWS Keyboard Manager' profile is loaded. JAWS intercepts the user's keystrokes, interpreting them as shortcut keys.</p> <p>Tables in FieldNet represent the greatest challenge to accessibility. Column headers are not associated with data in each row, which makes it difficult to determine what data is being read. To complicate matters, JAWS skips blanks. With Magnifier, the table is skipped entirely because [Tab] moves to the next button or edit field, making the focus jump to certain areas of a table or skipping it entirely.</p>

Criteria	Supporting Features	Remarks and explanations
<p>(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.</p>	<p>Some support. Most of application has exceptions.</p>	<p>Subcon window:</p> <p>Menus function when using only keyboard. The contract/subcontractor tree is registered as an outline and the acquiring focus for each level is possible with arrow keys. It is not possible to tab to the item selection or data entry screen. Once in item selection area, up and down select, but tab does not change focus to item's data entry area. Once in data entry areas, tab allows focus on each field.</p> <p>Subload and SubGen:</p> <p>These applications are used to load or generate subcontract data coming from or import into SiteManager's subcontract and vendor process.</p> <p>These are command line applications and not assessed with accessibility tools.</p>
<p>(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.</p>	<p>Not Applicable - Fundamental Alteration Exception Applies</p>	<p>SiteXchange is not supported, nor has it been release tested for use with Assistive Technologies.</p>

Criteria	Supporting Features	Remarks and explanations
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Some support. Most of application has exceptions.	<p>Subcon window:</p> <p>The contract/subcontractor tree is registered as an outline and acquiring/determining focus for each level of tree is possible. Item selection can be determined, but no text that identifies rows. Once in data entry areas, focus can be determined on each field.</p> <p>Subload and SubGen:</p> <p>These applications are used to load or generate subcontract data coming from or import into SiteManager's subcontract and vendor process.</p> <p>These are command line applications and not assessed with accessibility tools.</p>
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Support with exceptions.	<p>Subcon window:</p> <p>The contract/subcontractor tree is registered as an outline and its elements are identified by text. Item selection has no text that identifies rows. Once in data entry areas, fields and their are identified by text.</p>
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	N/A
